

6/22/26

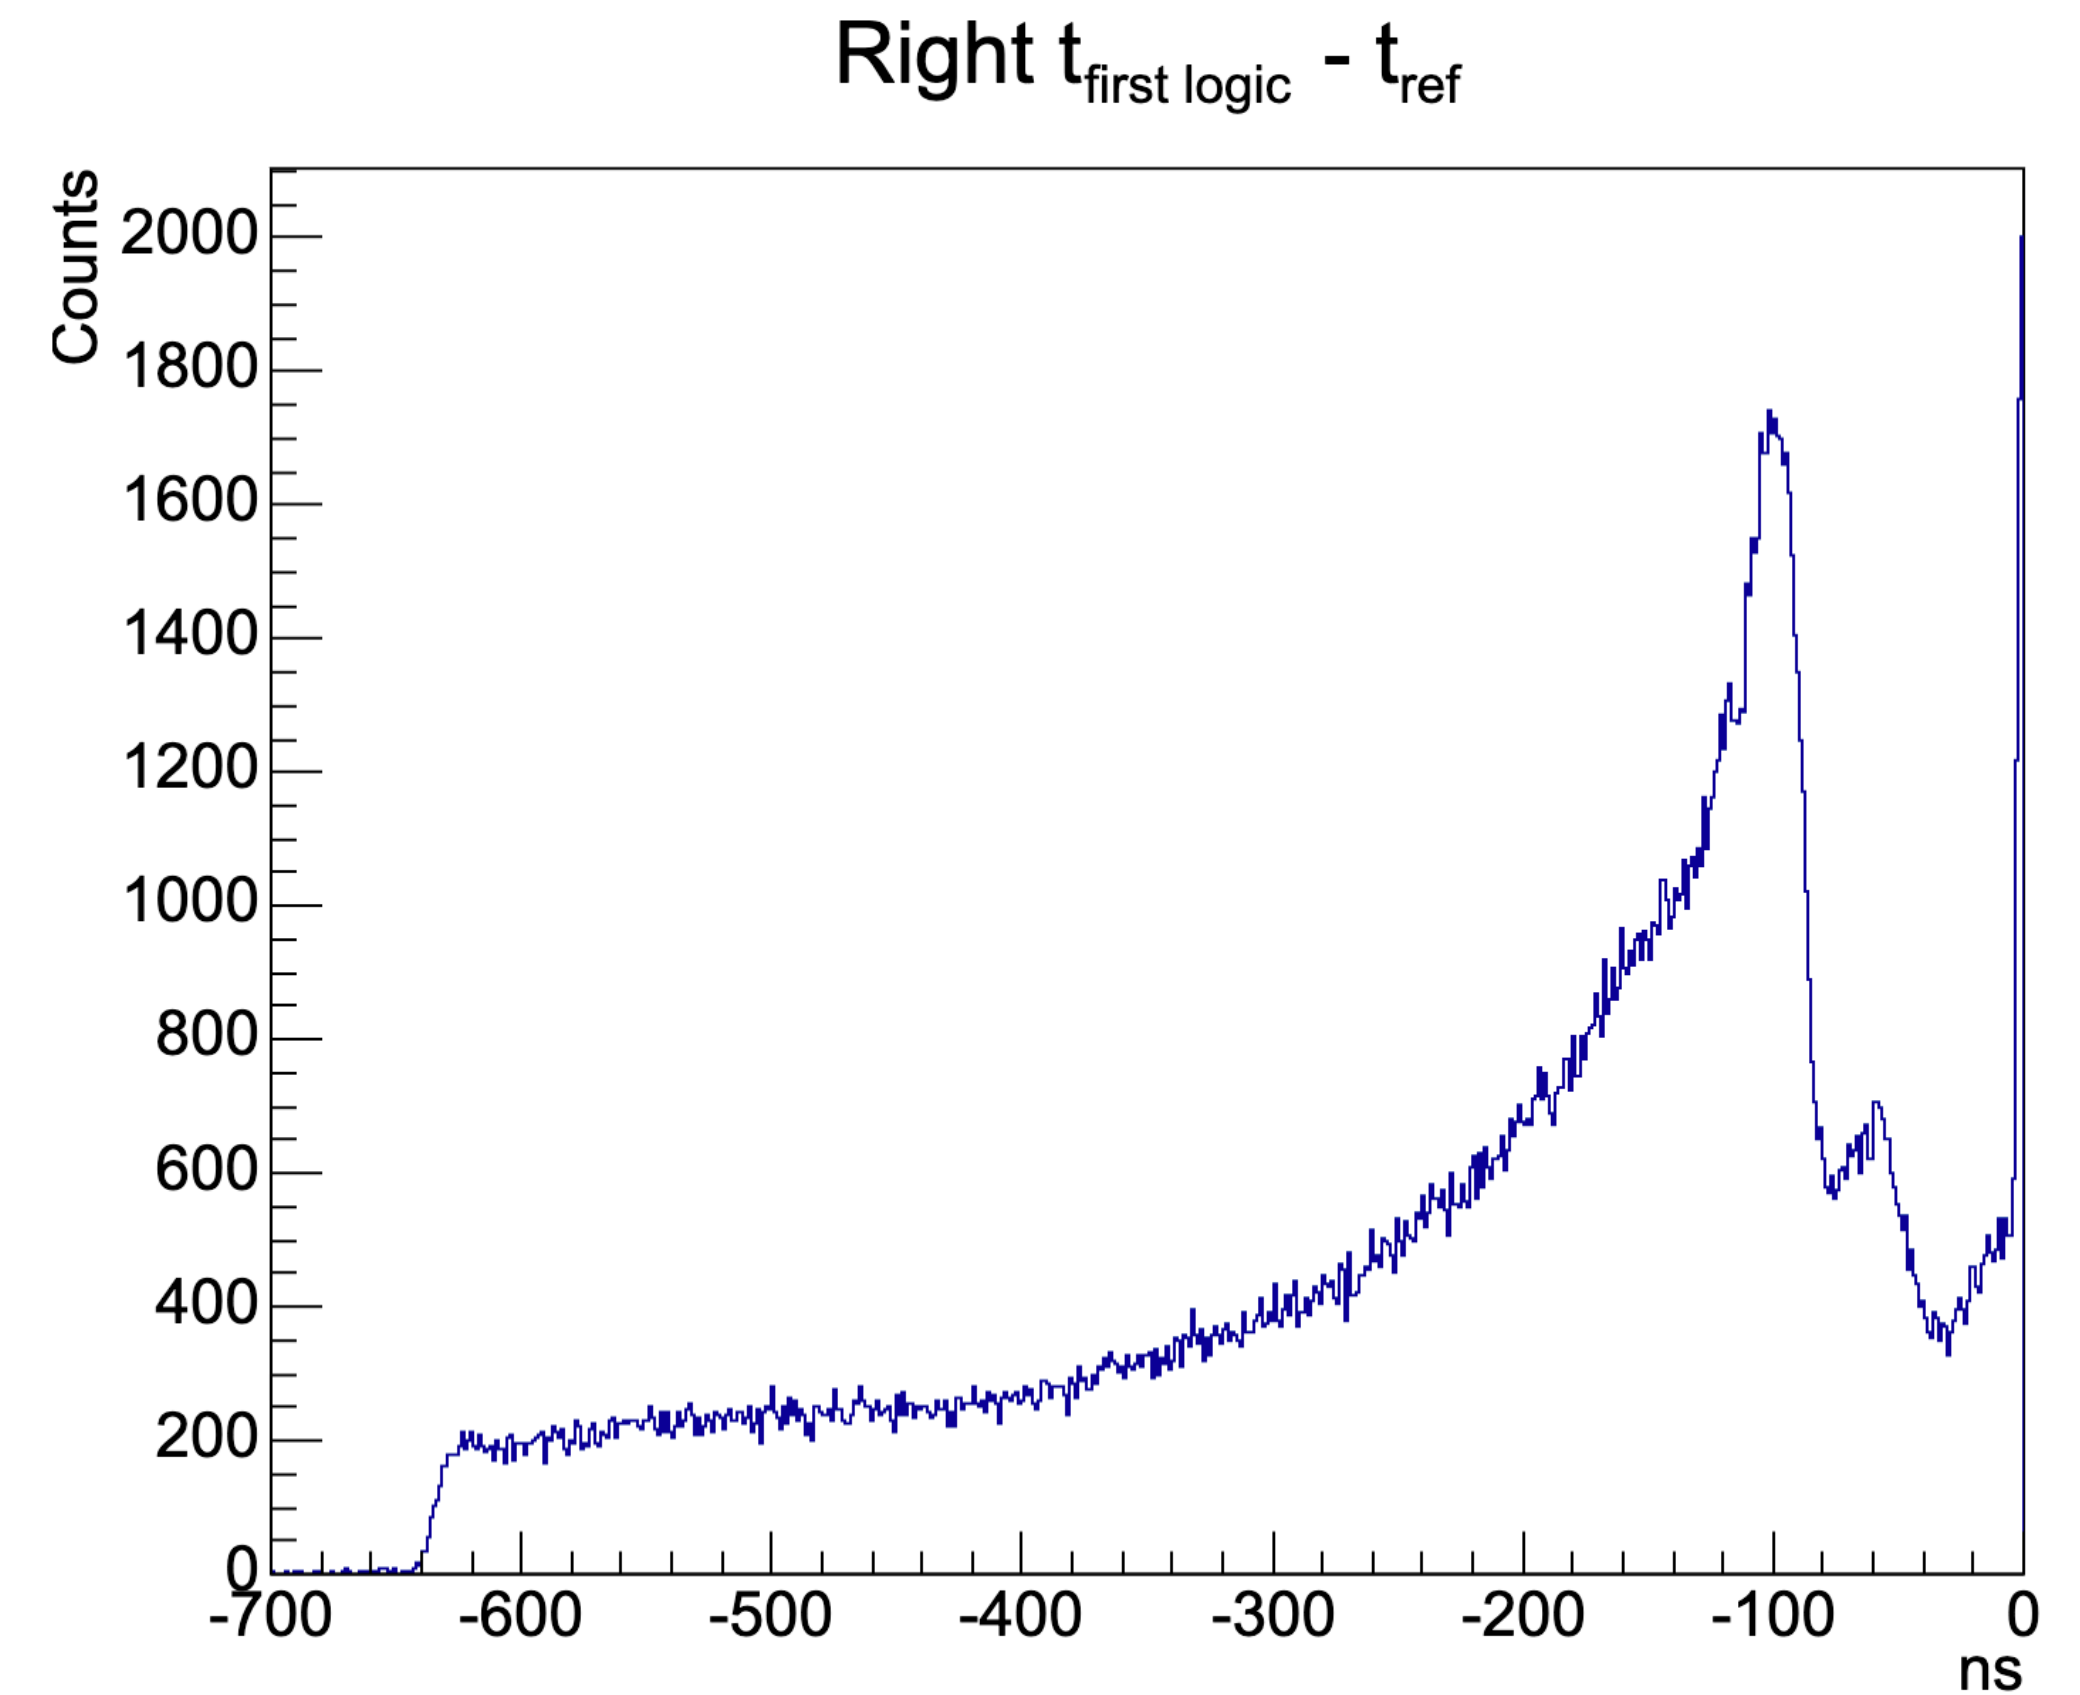

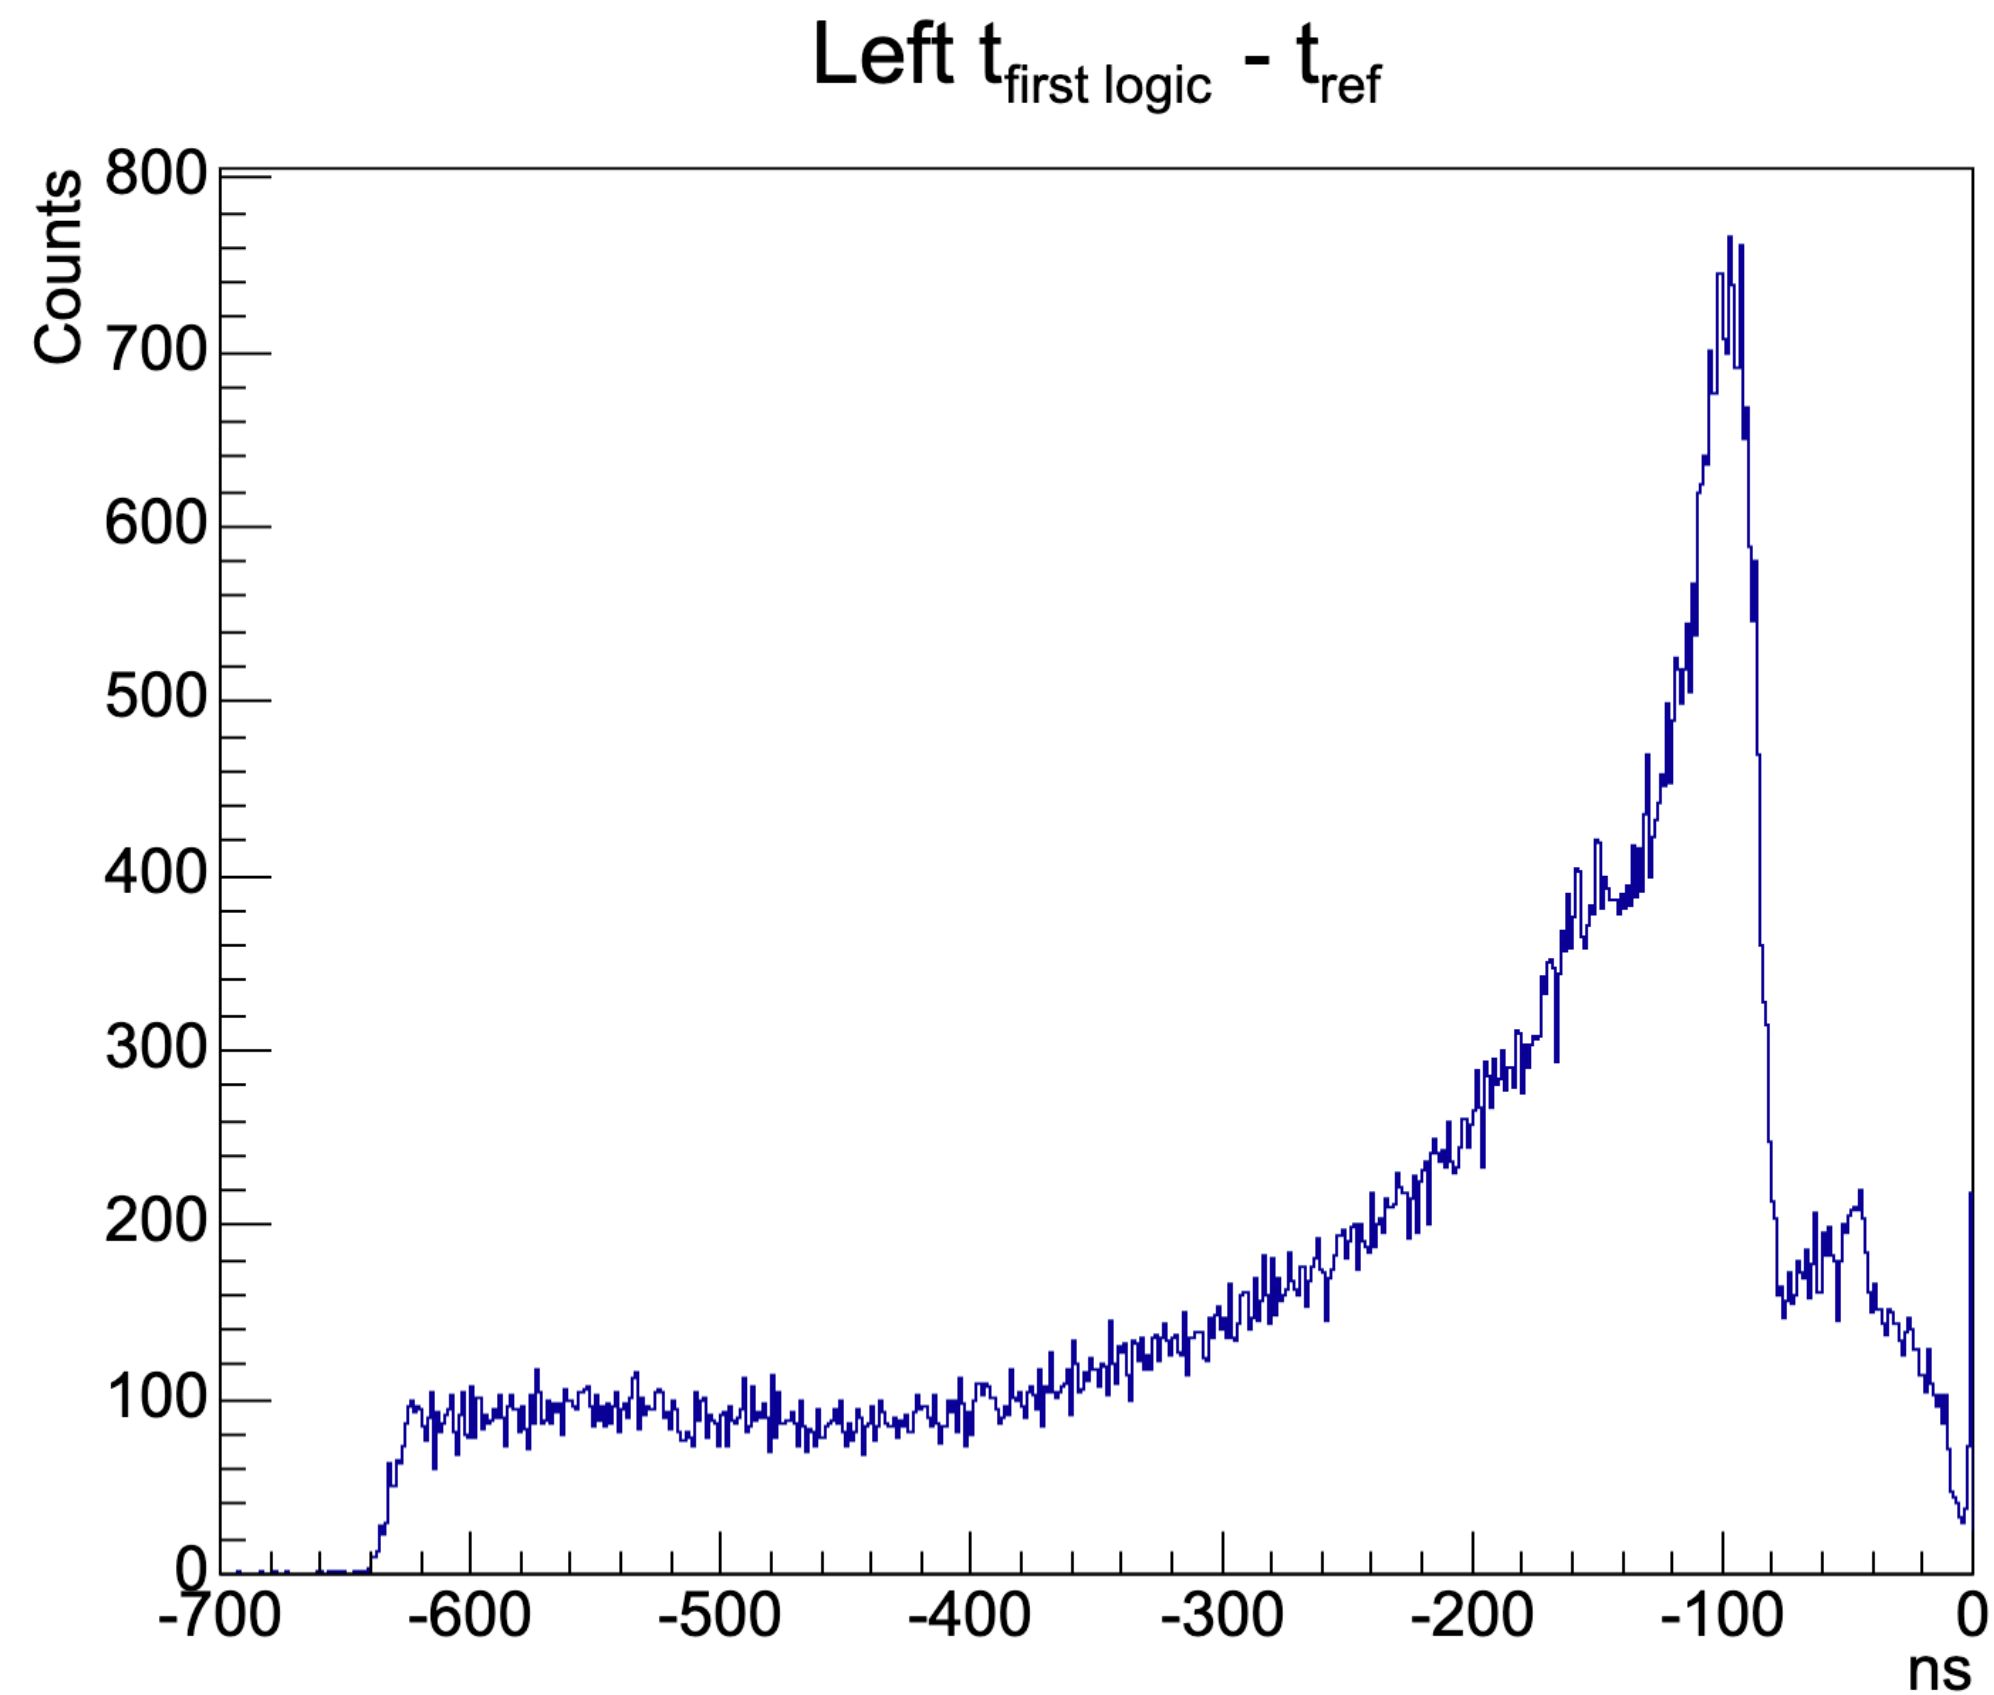

Definition of Terms:

- CalibratedHit: A calibrated LE, TE pair, its time is the LE time
- CoincHit: an instance of two CalibratedHits occurring within 5ns of one another on each side of a paddle
- FirstCoincHit: the first CoincHit in an event (there is one per event)
- LogicHit: The time of a logic pulse
- FirstCoincLogicHit: The time of the logic pulse closest to FirstCoincHit

Run 4217: Current around 10 μA , 1.5% DF, 1.1kHz, 13.6 μs width. Right at 37 A, left at 165 A. 28.71 MeV

Plot of FirstCoincLogicHit - FirstCoincLogicHit (Left: filter event which have FirstCoinc on plane 0, Right: filter events which have FirstCoinc on plane 1)

Run 4288: 24.5 MeV, 1.5% DF, 1.1kHz, 13.6 us, around 10 uA current. Right at 35 A, left at 150 A.

Plot of FirstCoincLogicHit - FirstCoincLogicHit (Left: filter event which have FirstCoinc on plane 0, Right: filter events which have FirstCoinc on plane 1)
