

Completed:

- Finished identifying, run tagging and implementing channel masking for all the GEMs used during DL commissioning run. Merged to cooker.

(Channel list found in gemControl.ini)

To do:

- No beam data available for the GEMs that failed early in summer. Data from JLab/test lab to be used.
- Scan over multiple runs to check for recurrence/fading of periodic noise at low ADCs
- Check using logical channel order/APV pin order
- Cluster Charge vs trigger rate study
- Hardware
