

Added gemControl dead values to GEMini

Before (only noisy values)

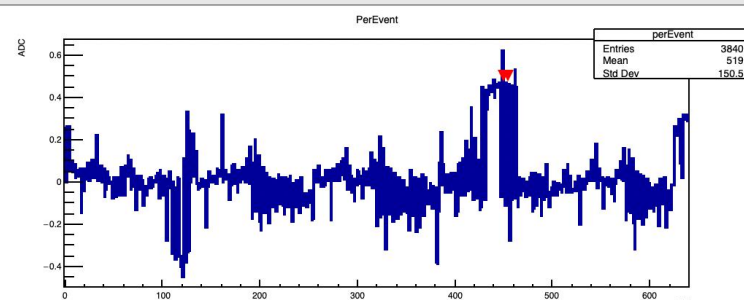

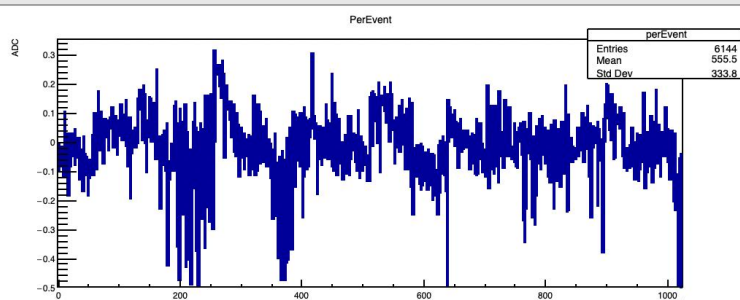

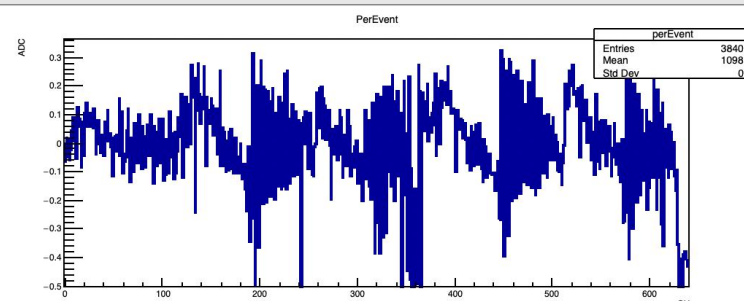

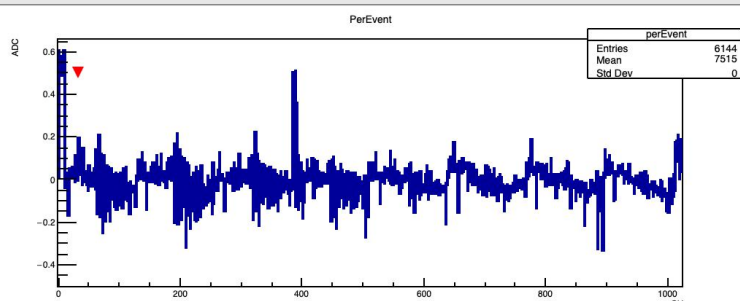

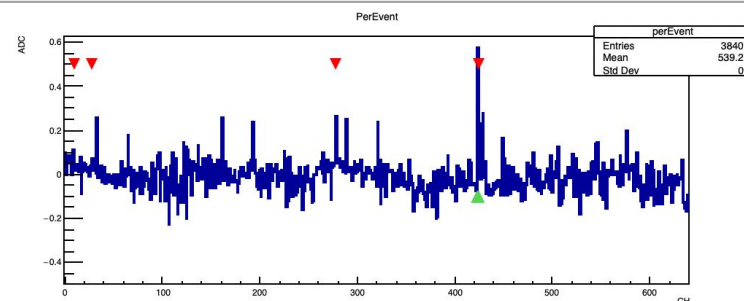

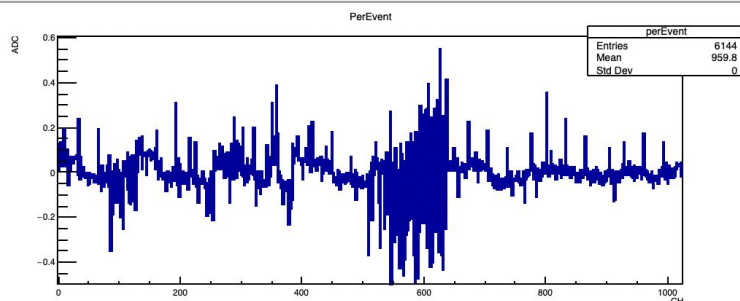

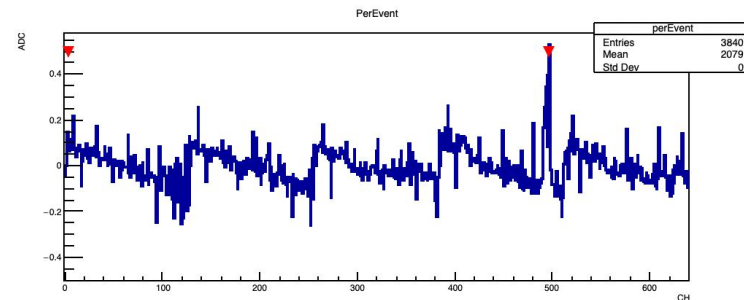

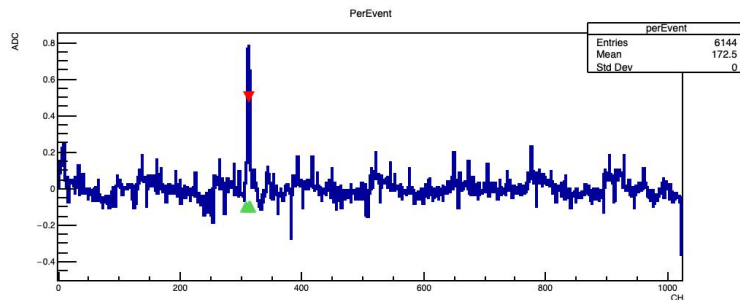

After (dead + noisy values)

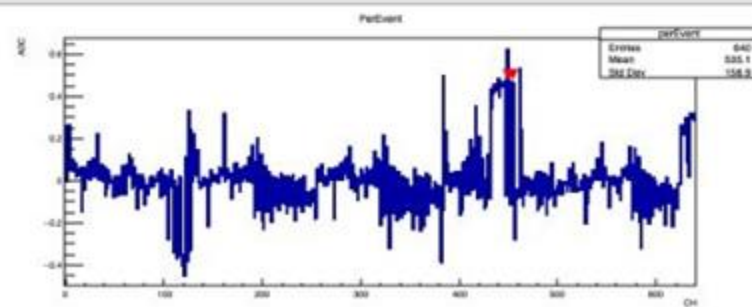

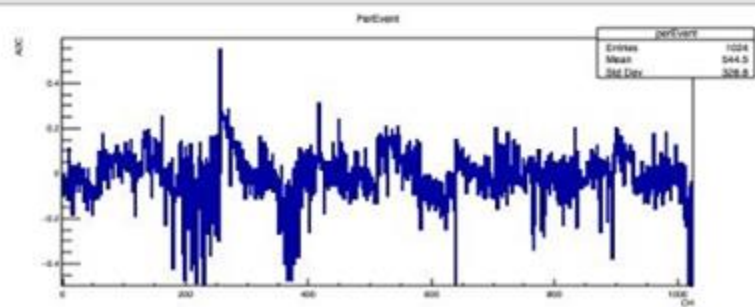

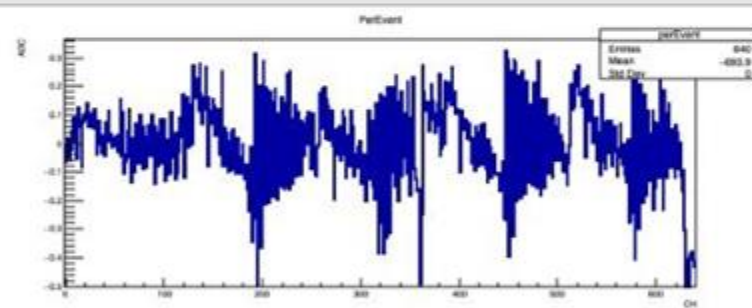

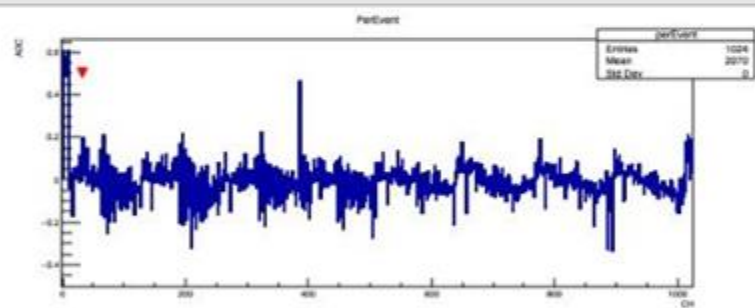

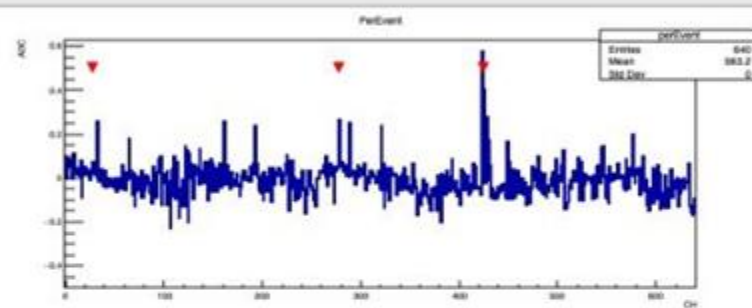

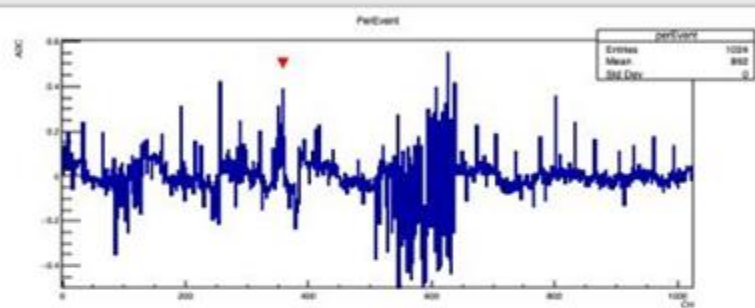

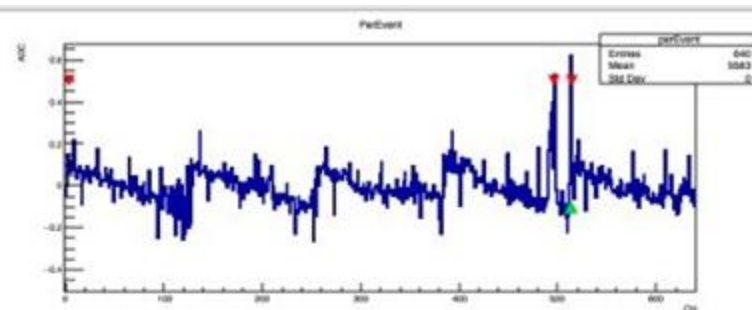

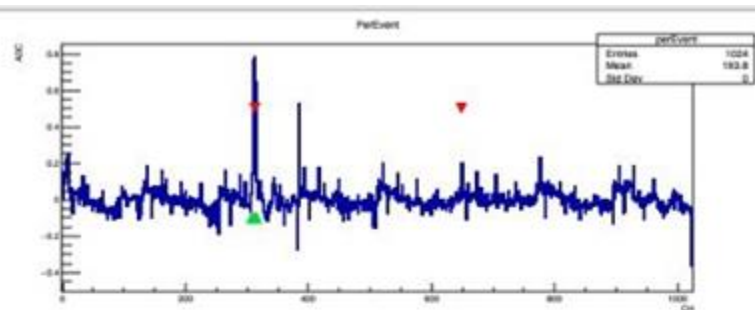

Before (only noisy values)

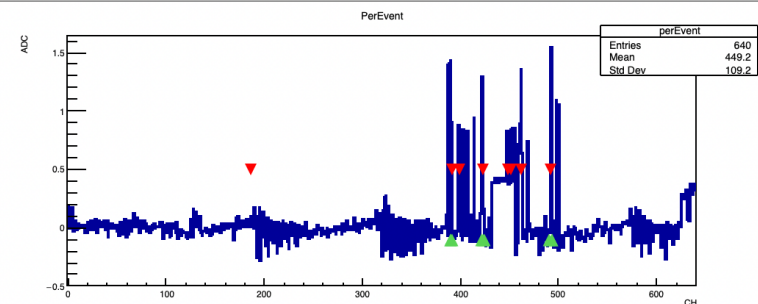

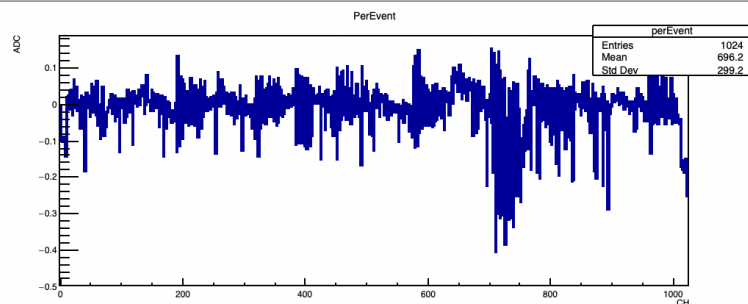

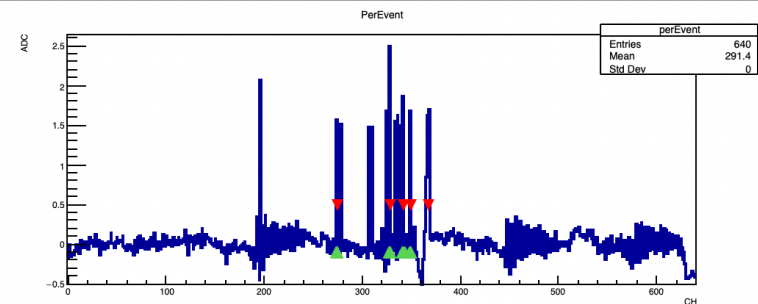

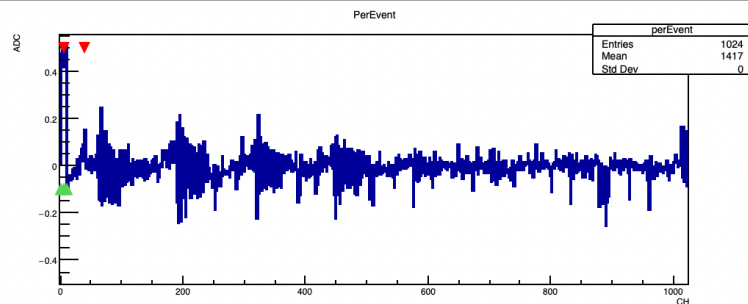

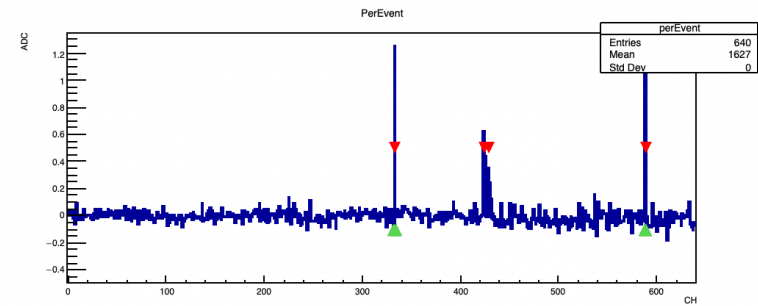

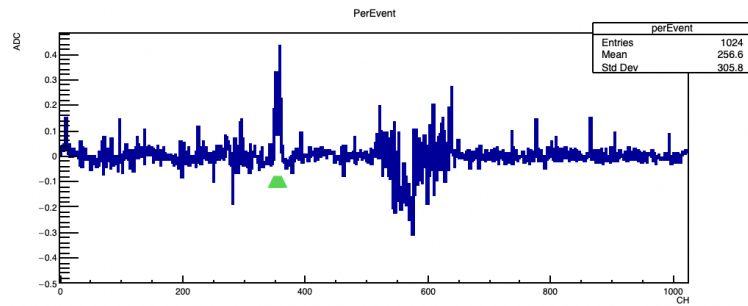

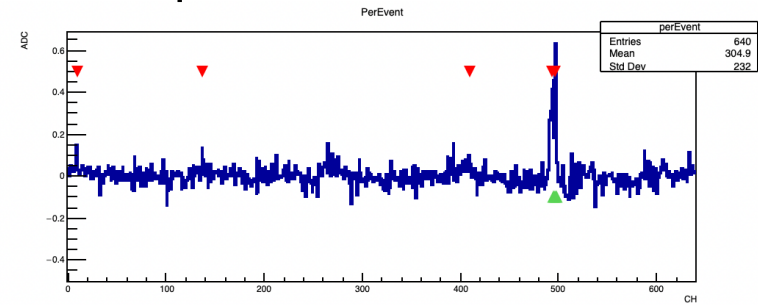

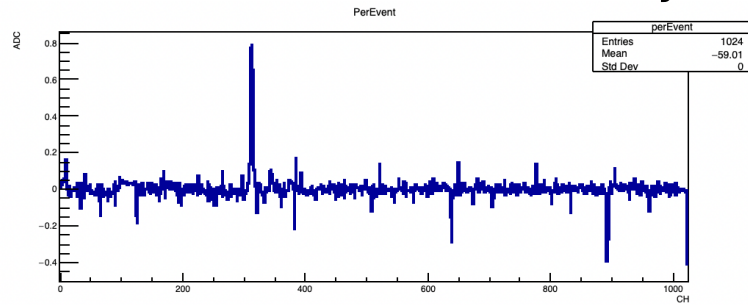

PerEvent

After (dead + noisy values)

dead + noisy values + new pedestal

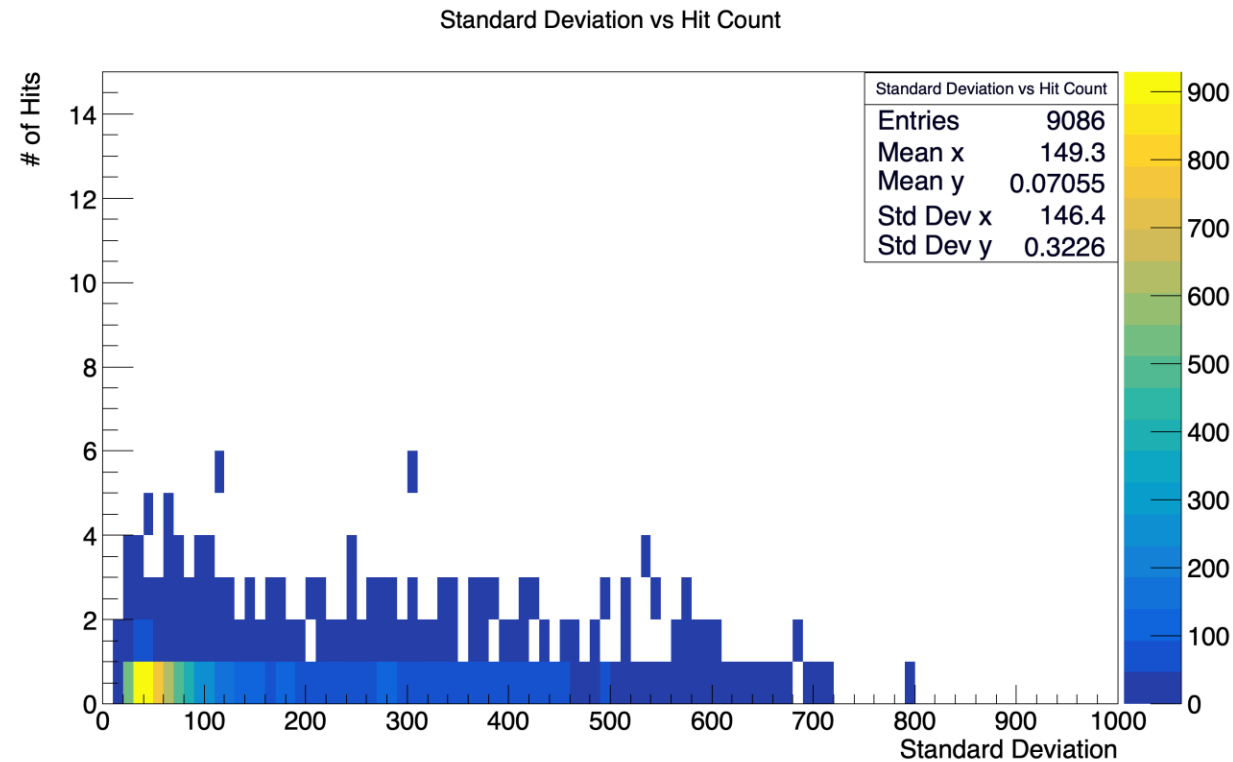

How much is clustering affected by noise?

X-axis: standard deviation from time samples a channel, averaged across all channels in a plane

Y-axis: Number of hits during that event.

Plane Left Bottom

Red: APV Ringing, Blue: Normal, Yellow: High peak
